OBJECTIVE

Computer Science student with hands-on experience in full-stack development, backend engineering, and database optimization. Experienced in building RESTful APIs using Node.js and Spring Boot, with a strong foundation in database design and software development. **Seeking a Software Engineer internship** or related fields to apply technical skills, contribute to real-world projects, and grow as a software engineer.

EDUCATION

Thammasat University, Rangsit Campus **Expected Graduation: Jan 2027**

B.S. Computer Science | Senior (Year 4) | GPAX: 3.70/4.0

TECHNICAL SKILLS

Languages: Java, Python, Go, JavaScript, SQL(Postgres, MySQL)

Front-End: ReactJS, NextJS, Tailwind CSS, Bootstrap, jQuery, HTML, CSS

Backend: NodeJS, Spring Boot, Fiber (Go)

Cloud & Dev-Ops: AWS, Jenkins, Docker

EXPERIENCE

Full-Stack Developer (Intern) | CubeSoftTech, Thailand **June 2026 – Present**

- Designed and developed an employee rewards and points redemption system, covering **database schema design**, **transaction management** and **end-to-end frontend and backend implementation**.
- **Investigated** and **resolved bugs** based on user feedback to improve system reliability and user experience.
- **Collaborated** with UX/UI designers to translate design specifications into user-friendly interfaces and ensure consistency between design and implementation.

ACTIVITIES

Exchange Program Participant | Osaka Metropolitan University, Japan **Dec 2025**

- Selected to participate in an international exchange program focused on **cross-domain collaboration** between Computer Science and Acoustics.
- Gained experience in international teamwork, research-oriented problem solving, and technology-for-impact perspectives.
- Developed the ability to **communicate technical ideas** across disciplines and adapt to different academic and cultural working environments.

Hackathon Participant | PRAGMA 41 Conference, Thammasat University **Jan 2026**

- **Participated in PRAGMA 41**, an international academic and research conference hosted at Thammasat University.
- Joined a 24-hour hackathon under the theme "Biodiversity and City Soundscape," bridging acoustic research and **real-world environmental problems.**
- Enhanced rapid **problem-solving skills** by working under time constraints, collaborating with **diverse team members**, and translating research concepts into practical solutions.

PROJECTS

N'Sound LINE Chatbot | Collaborative

- Built a **cloud-based** LINE chatbot to automate acoustic field data collection, eliminating manual location entry by capturing GPS data directly through chat interactions.
- Designed and **developed backend services** for data collection, storage, and media handling, ensuring reliability and scalability of the system.
- Collaborated in **defining data workflows** and validation processes to improve data accuracy and support efficient analysis of acoustic field data.

Health Risk Mapping | Collaborative — OMU x Thammasat

- Collaborated with students from **Osaka Metropolitan University** to design a system that **visualizes** field-collected health risk data on a map for public accessibility.
- Designed the **database schema** to support field survey and spatial data, focusing on consistency and ease of integration.

- Focused on presenting technical data in a way that non-technical users can easily understand, emphasizing real-world usability.

Fitness Management System | Course Project

- Designed and implemented a **database schema** for a fitness center management platform supporting member registration, class schedules, and instructor assignments.
- Developed backend services using **Spring Boot** to manage user authentication, membership status, and class availability.
- Built **RESTful APIs** and ensured database consistency through relational modeling and transaction management.
